Overview

These instructions apply to all SEL-311C Transmission Protection System relays with Ethernet and configurable labels.

The SEL-311C Configurable Labels Kit provides the materials and information needed to customize the target LED and operator control pushbutton areas of the front panel. Figure 1 and Figure 2 show the pocket areas and openings.

Figure 1  Typical SEL-311C Configurable Label Areas (Horizontal)

Figure 2  Typical SEL-311C Configurable Label Areas (Vertical)
The SEL-311C features a versatile front panel that you can customize for your needs. Use SELOGIC® control equations and slide-in, configurable front-panel labels to change the function and identification of target LEDs and operator control pushbuttons and LEDs.

The SEL-311C comes with blank labels. You can write on the blank labels or print your own customized labels.

If you need additional configurable label kits, contact your Technical Service Center or the SEL factory to obtain these kits (see Factory Assistance on page 3).

Removing Configurable Labels

Use the label removal tool to remove labels from the front-panel pockets.

Step 1. Slide the tip of the tool under the label at the pocket opening (see Figure 1 and Figure 2 for example opening locations).

Step 2. Push the exposed edge of the label against the label removal tool while pulling out both the label and label removal tool.

Creating Laser-Printed Labels

Use the following procedure to create laser-printed labels. You can find the label template files on the SEL website (www.selinc.com). In addition, these files are included on the SEL-311C Product Literature CD.

Step 1. Open the appropriate Microsoft® Word template.

Step 2. Fill in the fields.

NOTE: You can adjust the font size to accommodate more text within the cell.

Field space is limited; only the text that displays on the screen prints on the label.

Save the file often to preserve your work in progress.

Step 3. Test the position of the label text.

a. Print the template file to plain paper.

b. Examine the printed sheet for proper alignment. Carefully compare the printed page to the perforated stock sheets.

c. If the printed sheet is not aligned properly, proceed to Step 4.

d. If the labels appear as desired, proceed to Step 5.

Step 4. Make adjustments to margin settings, as necessary, to print in the proper location on the test sheet.

a. Use the Page Setup dialog box to adjust only the top or left margins as needed to correct the alignment.

Do NOT adjust the right or bottom margins.

b. Do another test print on plain paper.

c. Examine the label position.

d. Repeat as necessary until the alignment is correct.

NOTE: The default template font is from the Arial family. You can use this font or choose a different font that is available on your computer system.
Step 5. Print the labels on the perforated stock sheets.
   If the labels printed incorrectly, repeat this procedure beginning with Step 3.

Step 6. Fold and tear the perforated edges of the stock paper to remove the labels from the sheet.

Step 7. Remove the existing labels from the front-panel label pockets with the label removal tool.

Step 8. Insert the newly created labels in the appropriate pockets on the front panel.
