Overview

The SEL-400 Series Configurable Labels Kit provides the materials and information needed to customize the target LED and operator control pushbutton areas of the front panel. Figure 1 shows the pocket areas and openings for horizontal relays. Figure 2 shows the pocket areas and openings for vertical relays.

Figure 2 Typical Vertical SEL-400 Series Configurable Label Access

The SEL-400 Series features a versatile front panel that you can customize for your needs. Use SELOGIC® control equations and slide-in, configurable front-panel labels to change the function and identification of target LEDs and operator control pushbuttons and LEDs.

The SEL-400 Series comes with pre-printed labels. Alternatively, you can write on the back side of the pre-printed labels, use the blank labels provided in this kit, or print your own customized labels using the label templates provided on the included CD-ROM.

If you need additional configurable label kits, contact your Technical Service Center or the SEL factory to obtain these kits (see Factory Assistance on page 4).

Removing Configurable Labels

Use the label removal tool to remove labels from the front-panel pockets.

Step 1. Slide the tip of the tool under the label at the pocket opening (see Figure 1 for example opening locations).

Step 2. Push the exposed edge of the label against the label removal tool while pulling out both the label and label removal tool.
Creating Laser-Printed Labels

Use the following procedure to create laser-printed labels. You can find label template files on the SEL website (www.selinc.com) or the included CD-ROM.

Step 1. Open the appropriate Microsoft® Word template. (Templates are provided for 8 and 12 pushbutton front panels used on vertical and horizontal relays.)

Step 2. Fill in the fields.

Use the Tab and Arrow keys or your mouse to move from field to field. Field space is limited; only the text that displays on the screen prints on the label.

Save the file often to preserve your work in progress.

Step 3. Test the position of the label text.

a. Print the template file to plain paper.

b. Examine the printed sheet for proper alignment. Carefully compare the printed page to the perforated stock sheets.

c. If the printed sheet is not aligned properly, proceed to Step 4.

d. If the labels appear as desired, proceed to Step 5.

Step 4. Make adjustments to margin settings, as necessary, to print in the proper location on the test sheet.

a. Use the Page Setup dialog box to adjust only the top or left margins as needed to correct the alignment.

DO NOT adjust the right or bottom margins.

b. Do another test print on plain paper.

c. Examine the label position.

d. Repeat as necessary until the alignment is correct.

Step 5. Print the labels on the perforated stock sheets.

If the labels printed incorrectly, repeat this procedure beginning with Step 3.

Step 6. Fold and tear the perforated edges of the stock paper to remove the labels from the sheet.

Step 7. Remove the existing labels from the front-panel label pockets with the label removal tool.

Step 8. Insert the newly created labels in the appropriate pockets on the front panel.
