SEL-2664S
Stator Ground Protection Relay

100% Stator Ground Fault Protection
100% of the Time

Major Features and Benefits

The SEL-2664S Stator Ground Protection Relay provides an exceptional combination of protection, metering, monitoring, control, and communications in a compact industrial package.

➤ **Standard Protection and Control Features.** Protect your generator against stator insulation degradation and ground faults, and monitor the neutral grounding resistor. When used with an SEL-2664 Field Ground Module, the SEL-2664S Relay protects against rotor field insulation faults to ground. The stator ground protection works for 100 percent of the stator winding and for all operating conditions, including when the generator is starting, ramping, or offline using a novel multifrequency injection method in conjunction with the neutral overvoltage elements.

➤ **Operator Controls.** Take advantage of multiple methods for accessing and using the operator interface of the relay. The front and side panels have eight LEDs that indicate the ENABLED, TRIP, WARNING, 64S, 64F, 59N, 64F MODULE FAIL, 64S INJECT ON status of the relay. The front panel also provides a TARGET RESET pushbutton for resetting the relay and the targets.

➤ **Relay and Logic Settings Software.** Use acSELerator QuickSet® SEL-5030 Software to reduce your engineering costs for relay settings and logic programming and simplify development of SELOGIC® control equations.

➤ **Metering and Monitoring.** Use built-in metering functions to eliminate separately mounted metering devices. Analyze SER reports and oscillographic event reports for rapid commissioning, testing, and post-fault diagnostics. Additional monitoring functions include the Profile Report.

➤ **Control Inputs and Outputs.** Take advantage of two internally wetted control inputs and four contact outputs (one Form C and three Form A) for control and status indication.
Communications Ports.
- Port 1 with dual fiber-optic Ethernet ports
- Port 2 with an ST® fiber-optic EIA-232 serial port
- Front port and Port 3 with an EIA-232 configurable serial port

Communications Protocols.
- Modbus® RTU, Modbus TCP/IP
- DNP3 serial and LAN/WAN
- IEC 61850
- Simple Network Time Protocol (SNTP)
- File Transfer Protocol (FTP)
- Telnet (SEL ASCII)
- SEL protocols, including MIRRORED BITS® communications

Conformally Coated.

Overview

Figure 1 Functional Diagram

* Neutral Grounding Resistor
† Neutral Grounding Transformer
Protection and Control Features

➤ **Stator Insulation Protection.** The 64S element of the SEL-2664S uses multisine signal injection at generator neutral to monitor 100 percent of the stator insulation. The element works with the generator in- or out-of-service, including the generator ramp up, with no blind period. Two levels of 64S elements provide warning and trip along with delay and torque control settings. The 64S elements require neutral voltage below an allowable injection voltage level and, together with the 59N elements described later, provide 100 percent stator ground protection 100 percent of the time.

➤ **Rotor Field Ground Protection.** An SEL-2664S Relay connected to an SEL-2664 Field Ground Module detects field ground faults by measuring field insulation-to-ground resistance with the switched dc voltage injection method. Two-level protection for warning and trip functions along with delay and torque control settings is provided. The module transmits the insulation resistance value to the relay through a fiber-optic cable with ST connectors.

➤ **Neutral Overvoltage Protection.** The SEL-2664S provides two neutral overvoltage elements. The 59N1 element uses the fundamental frequency magnitude of neutral voltage (VN), and the 59NRMS element uses the rms magnitude of VN. The relay provides one level from each of the 59N1 and 59NRMS elements for trip, along with delay and torque control settings. The 59N elements are independent of the 64S elements described previously. The combination of the two, with their overlapping coverage, provides 100 percent stator winding protection 100 percent of the time.

➤ **Neutral Ground Resistor Monitor.** The SEL-2664S monitors the generator neutral grounding resistor (NGR) value using NGR elements and operates when a short or an open circuit is detected.

Metering and Monitoring

**Metering Functions**

The SEL-2664S provides metering for neutral voltage and current. The relay meters injection source currents and voltages, stator insulation resistance and capacitance, and neutral ground resistance. The relay also meters field insulation resistance when used with the SEL-2664 Field Ground Module. Refer to **Table 1** for detailed descriptions.

Profile Report Monitoring

Profile report monitoring provides a periodic snapshot (selectable rate of every 1, 5, 15, 30, or 60 minutes) of as many as 17 selectable analog quantities from the complete list of analog quantities the SEL-2664S generates. Examples of analog quantities available include the following:

- Neutral insulation resistance
- Injected rms current
- Neutral ground resistance
- Third-harmonic neutral voltage

When used with the SEL-2664 Field Ground Module, the relay can also record the field insulation resistance.

The SEL-2664S maintains profile information in a nonvolatile buffer memory. The memory can hold data for 9800 time-stamped entries.

Automation

Flexible Control Logic and Integration Features

The SEL-2664S has three independently operated serial ports: one front and one rear EIA-232 serial port and one rear fiber-optic serial port. Also, the relay supports dual fiber Ethernet ports in the rear. The relay needs no special communications software. You can use any system that emulates a standard terminal system. Establish communication by connecting computers, modems, protocol converters, printers, an SEL real-time automation controller (RTAC), SEL communications processor, SEL computing platform, SCADA, and/or RTUs for local or remote communication. Refer to Table 2 for a list of communications protocols available in the SEL-2664S.

<td>Ethernet-based protocol that provides time synchronization of the relay.</td>
</tr>
</tbody>
</table>
Apply an SEL communications processor as the hub of a star network, with point-to-point connection between the hub and the SEL-2664S (see Figure 3).

The communications processor supports external communications links including the public switched telephone network for engineering access to dial-out alerts and private line connections of the SCADA system.

The SEL-2664S control logic improves integration in the following ways.

➤ **Eliminates RTU-to-relay wiring with eight remote bits.** Set, clear, or pulse remote bits through the use of serial port commands. Program the remote bits into your control scheme with SELOGIC control equations. Use remote bits for SCADA-type control operations, such as trip and close.

➤ **Replaces traditional latching relays.** Replace as many as eight traditional latching relays for such functions as “remote control enable” with latch bits. Program latch set and latch reset conditions with SELOGIC control equations. Use optoisolated inputs, remote bits, or any programmable logic condition to set or reset the nonvolatile latch bits. Each latch bit retains its state when the relay loses power.

➤ **Eliminates external timers.** Replace external timers for custom protection or control schemes with eight general-purpose SELOGIC control equation timers. Each timer has independent time-delay pickup and dropout settings. Program each timer input with any element you need (e.g., time qualify a current element). Assign the timer output to trip logic, transfer trip communications, or other control scheme logic.

### Fast SER Protocol

SEL Fast SER Protocol provides SER events to an automated data collection system. SEL Fast SER Protocol is available on any serial port. Devices with embedded processing capability can use these messages to enable and accept unsolicited binary SER messages from the SEL-2664S Relay.

SEL relays and communications processors have two separate data streams that share the same serial port. The normal serial interface consists of ASCII character commands and reports that are human readable through use of a terminal or terminal emulation package. The binary data streams can interrupt the ASCII data stream to obtain information, and then allow the ASCII data stream to continue. This mechanism allows use of a single communications channel for ASCII communications (e.g., transmission of a long event report) interleaved with short bursts of binary data to support fast acquisition of metering or SER data.

### Ethernet Network Architectures

![Figure 4 Simple Ethernet Network Configuration](image-url)

Cat 5 shielded twisted pair (STP) cables with RJ45 connectors (SEL-C627/C628) for copper Ethernet ports

OR

Fiber-optic Ethernet cables with LC connectors (SEL-C808) for fiber-optic Ethernet ports
Operator Controls

There are multiple methods for accessing the operator interface of the relay. As shown in Figure 20, the front and side panels have eight LEDs that indicate the ENABLED, TRIP, WARNING, 64S, 64F, 59N, 64F MODULE FAIL, 64S INJECT ON status of the relay. The front panel also provides a TARGET RESET pushbutton for resetting the relay and the targets.

Relay and Logic Settings Software

QuickSet simplifies settings and provides analysis support for the SEL-2664S. Create and manage relay settings with QuickSet in the following ways:

➤ Develop settings offline with an intelligent settings editor that only allows valid settings.
➤ Create SELOGIC control equations with a drag-and-drop text editor.
➤ Configure proper settings through the use of online help.

➤ Organize settings with the relay database manager.
➤ Load and retrieve settings through use of a simple PC communications link.

With QuickSet, you can use integrated waveform and harmonic analysis to verify settings, analyze events, and analyze power system events.
The following features of QuickSet monitor, commission, and test the SEL-2664S.

➤ The PC interface remotely retrieves power system data.
➤ The HMI monitors meter data, Relay Word bits, and output contacts status during testing. The control window allows resetting of diagnostics, and targets.
➤ The Firmware Loader in the Tools menu helps you upgrade the firmware.

Applications

The SEL-2664S is intended for high-resistance grounded generator applications and cannot be used with low-impedance-grounded, solidly grounded, and ungrounded configurations. See Application Considerations in the SEL-2664S Instruction Manual for additional details.

You can use the SEL-2664S to provide protection at standstill and online with most typical levels of third-harmonic voltage (VN3). The injection-based function of the SEL-2664S requires that VN/NN terminal voltage remains under 26 V peak. If a generator produces VN3 above this level, even under normal load conditions, the injection signal stops, disabling the 64S elements. However, 59N1, 59NRMS, and 64F elements continue to protect the generator, and 64S elements are immediately restored when VN3 drops below the safe level. Because high VN3 indicates there is no ground fault near neutral, the disabling of 64S elements has an insignificant impact on protection.

If you want to avoid disabling 64S elements, the SEL-2664S can be configured to inject a signal at an NGR Tap. See Figure 7 for basic ac connections using the NGR Tap.

Figure 8 and Figure 9 show the ac connections for the SEL-2664S with the neutral CT on the secondary side of the neutral grounding transformer.

Figure 7 Basic AC Connections Using the NGR Tap

![Figure 7 Basic AC Connections Using the NGR Tap](image)

![Figure 8 AC Connections With Neutral CT on the Secondary Side of the Neutral Grounding Transformer](image)
Figure 9  AC Connections for the SEL-2664S and SEL-700G Relays With Neutral CTs on the Secondary Side of the Neutral Grounding Transformer

Figure 10 shows the ac connections for the SEL-2664S with the neutral ground resistor (NGR) and CTN on the primary side and a neutral voltage transformer.

Figure 10  AC Connections With Neutral CT on the Primary Side and Neutral Voltage Transformer

Figure 11  AC Connections With NGR in the Secondary Side of a Wye-Broken Delta Grounding Transformer on the Generator Terminals

Figure 11 shows the ac connections with NGR in the secondary side of a wye-broken delta grounding transformer on the generator terminals.

Figure 12 shows the typical ac connections for protection using redundant relays shown with neutral CTs on the secondary side of the neutral grounding transformer. This application requires Relay 1 to set the Injection Source Mode setting, MODE_SRC := P1 and Relay 2 to set the Injection Source Mode setting, MODE_SRC := P2.

Figure 12  AC Connections for Protection Using Redundant Relays Shown With Neutral CTs on the Secondary Side of the Neutral Grounding Transformer
The SEL-2664S is generally applied to single generators with high-resistance grounded neutral as shown in Figure 8 through Figure 12. Similarly, it can also be applied to a parallel generators configuration if only one of the generators is grounded (e.g., cross-compound generators).

For two generators connected in parallel, each with high-resistance grounded neutral but sharing a common step-up transformer, you can use two SEL-2664S Relays (see Figure 13), and follow the special considerations and limitations described in the SEL-2664S Instruction Manual for such a configuration.

Figure 13  Parallel Generators Configuration—AC Connections Using Two SEL-2664S Relays

See Figure 14 for a typical example of the dc connections for 100 percent stator ground protection using the SEL-2664S Stator Ground Protection Relay (stator-to-ground insulation resistance measurement) and the SEL-2664 Field Ground Module (dc field-to-ground insulation resistance measurement).

Specifications

Compliance

Designed and manufactured under an ISO 9001 certified quality management system
47 CFR 15B, Class A
This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.
UL Listed to U.S. and Canadian safety standards (File E212775; NRGU; NRGU7)
CE Mark
RCM Mark

General

**CBCT Current Input (IN)**
- Nominal Input Current: 5 mA ac rms
- Saturation Current Rating: Linear to 20 mA peak
- Continuous Thermal Rating: 1 A
- Measurement Clipping Level: ≥ 22 mA Peak
- One-Second Thermal Rating: 10 A
- Burden Rating: 10 Ω
- Rated Insulation Voltage (Uij): Galvanically connected to 64S terminal common

**Neutral Voltage Input (VN)**
- Rated Operating Voltage (Uej): 2.5–240 Vac
- Rated Insulation Voltage (Uij): 300 Vac
- Maximum Continuous Overvoltage Rating: 275 Vac

**Injection Source (I_SRC)**
- Source Rating: 50 VA continuous
- Nominal Injected Current Amplitude: 0.5–5.0 A rms
- Continuous Thermal Rating: 5 A rms
- Amplifier Clipping Level: >±20 V Peak
- Four Frequency Multisine Injection
  - For 60 Hz nominal: 18, 24, 36, and 48 Hz
  - For 50 Hz nominal: 15, 20, 30, and 40 Hz
- Maximum Open Terminal Voltage: 26 V peak
- Protection: Self-protecting

**Power Supply**
- Relay Start-Up Time: Approximately 5–10 seconds (after power is applied until the ENABLED LED turns on)
- High-Voltage Supply
  - Rated Supply Voltage: 110–240 Vac, 50/60 Hz
  - Input Voltage Range: 85–264 Vac
  - Power Consumption: <120 VA (ac) <120 W (dc)
  - Intermittent: 10 ms @ 125 Vdc

**Fuse Ratings**

<table>

</table>

**Output Contacts**

**General**
The relay supports Form A and Form C outputs.

**Dielectric Test Voltages:** 2500 Vac

**Impulse Withstand Voltage (UIMP):** 5000 V

**Mechanical Durability:** 100,000 no-load operations

**Standard Contacts**
- Pickup/Dropout Time: ≤8 ms (coil energization to contact closure)
- Rated Insulation Voltage: 300 Vdc
- Make: 30 A @ 250 Vdc per IEEE C37.90
- Continuous Carry: 6 A @ 70°C
- 4 A @ 85°C
- Thermal: 50 A for 1 s
- Contact Protection: 360 Vdc, 80 J MOV protection across open contacts

Breaking Capacity (10,000 Operations) per IEC 60255-0-20:1974:
- 24 Vdc 0.75 A L/R = 40 ms
- 48 Vdc 0.50 A L/R = 40 ms
- 125 Vdc 0.30 A L/R = 40 ms
- 250 Vdc 0.20 A L/R = 40 ms

Cyclic (2.5 Cycles/Second) per IEC 60255-0-20:1974:
- 24 Vdc 0.75 A L/R = 40 ms
- 48 Vdc 0.50 A L/R = 40 ms
- 125 Vdc 0.30 A L/R = 40 ms
- 250 Vdc 0.20 A L/R = 40 ms

**AC Output Ratings**
- Maximum Operational Voltage (Uej) Rating: 240 Vac
- Insulation Voltage (Uij) Rating (excluding EN 61010-1): 300 Vac
- Contact Rating Designation: B300

Utilization Category: AC-15
- One-Second Thermal: 50 A

**AC-15**
- Operational Voltage (Ue): 120 Vac
- Operational Current (Ie): 3 A
- Make Current: 30 A
- Break Current: 3 A
- Electromagnetic loads > 72 VA, PF < 0.3, 50–60 Hz

Voltage Protection Across Open Contacts: 270 Vac, 80 J
Optoisolated Control Inputs (Internally Wetted to 24 Vdc)
- Current Draw at Nominal DC Voltage: 4 mA typical
- Rated Insulation Voltage ($U_i$): 300 Vac
- Rated Impulse Withstand Voltage ($U_{imp}$): 5000 V
- Pickup/Dropout Time: <20 ms

Time-Code Input
- Format: Demodulated IRIG-B
  - On (1) State: $V_{ih} \geq 2.2$ V
  - Off (0) State: $V_{il} \leq 0.8$ V
- Input Impedance: 2 kΩ
- Synchronization Accuracy Internal Clock:
  - All Reports: ±5 ms
  - Simple Network Time Protocol (SNTP) Accuracy Internal Clock:
    - ±5 ms

Unsynchronized Clock Drift Relay
- Powered: 2 minutes per year, typically

Communications Ports
- Standard EIA-232 (2 Ports)
  - Location: Front Panel
  - Rear Panel
  - Data Speed: 300–38400 bps
- Ethernet Port
  - Dual 100BASE-FX (LC connector)
- Standard Multimode Fiber-Optic Serial Port
  - Location: Rear Panel
  - Data Speed: 300–38400 bps

Fiber-Optic Ports Characteristics
- Port 1 (or 1A, 1B) Ethernet
  - Wavelength: 1300 nm
  - Optical Connector Type: LC
  - Fiber Type: Multimode
  - Link Budget: 16.1 dB
  - Typical TX Power: −15.7 dBm
  - RX Min. Sensitivity: −31.8 dBm
  - Fiber Size: 62.5/125 μm
  - Approximate Range: −6.4 km
  - Data Rate: 100 Mbps
  - Typical Fiber Attenuation: −2 dB/km
- Port 2 Serial
  - Wavelength: 820 nm
  - Optical Connector Type: ST
  - Fiber Type: Multimode
  - Link Budget: 8 dB
  - Typical TX Power: −16 dBm
  - RX Min. Sensitivity: −24 dBm
  - Fiber Size: 62.5/125 μm
  - Approximate Range: −1 km
  - Data Rate: 5 Mbps
  - Typical Fiber Attenuation: −4 dB/km

Communications Protocols
- SEL, Modbus, DNP3, FTP, TCP/IP, Telnet, SNTP, IEC 61850, MIRRORED Brrs

Operating Temperature
- IEC Performance Rating
  - (per IEC/EN 60068-2-1 and 60068-2-2):
    - −40° to +85°C (−40° to +185°F)
  - Not applicable to UL applications

Operating Environment
- Insulation Class: 1
- Pollution Degree: 2
- Overvoltage Category: II
- Atmospheric Pressure: 80–110 kPa
- Relative Humidity: 5%–95%, noncondensing
- Maximum Altitude Without Derating (Consult Factory for Higher Altitude Derating):
  - 2000 m

Dimensions
- Surface Mounting
  - Width: 26.12 cm (10.28 in) maximum
  - Depth: 13.21 cm (5.2 in) maximum
  - Height: 26.54 cm (10.45 in) maximum
- Panel Mounting

  - 85°C, 16 hours

Damp Heat, Steady State:
- IEC 60255-27:2013; Section 10.6.1.5
  - 40°C, 93% relative humidity, 10 days

Damp Heat, Cyclic:
- IEC 60068-2-30:2001
- IEC 60255-27:2013; Section 10.6.1.6
  - 25–55°C, 6 cycles, 95% relative humidity

Dielectric Strength and Impulse Tests

Dielectric (HiPot):
- IEC 60255-27:2013; Section 10.6.4.3
- IEEE C37.90-2005
  - 2.5 kV ac on contact outputs
  - 3.6 kVdc on power supply IN, VN, contact input terminals

Impulse:
- IEC 60255-27:2013; Section 10.6.4.2
  - Severity Level: 0.5 J, 5 kV
- IEEE C37.90-2005
  - Severity Level: 0.5 J, 5 kV

RFI and Interference Tests

EMC immunity

Electrostatic Discharge Immunity:
- IEC 61000-4-2:2008
- IEC 60255-26:2013; Section 7.2.3
- IEEE C37.90.3:2001
  - Severity Level 4
  - 8 kV contact discharge
  - 15 kV air discharge

Radiated RF Immunity:
- IEC 61000-4-3:2010
- IEC 60255-26:2013; Section 7.2.4
  - 10 V/m
  - IEEE C37.90.2-2004
  - 20 V/m

Fast Transient, Burst Immunity:
- IEC 61000-4-4:2012
- IEC 60255-26:2013; Section 7.2.5
  - 4 kV @ 5.0 kHz
  - 2 kV @ 5.0 kHz for comm. ports

Surge Immunity:
- IEC 61000-4-5:2005
- IEC 60255-26:2013; Section 7.2.7
  - 1 kV line-to-line
  - 2 kV line-to-earth

Surge Withstand Capability

Immunity:
- IEC 61000-4-18:2010
- IEC 60255-26:2013; Section 7.2.6
  - 2.5 kV common mode
  - 1 kV differential mode
  - 1 kV common mode on comm. ports
  - IEEE C37.90.1-2002
  - 2.5 kV oscillatory
  - 4 kV fast transient

Conducted RF Immunity:
- IEC 61000-4-6:2008
- IEC 60255-26:2013; Section 7.2.8
  - 10 Vrms

Magnetic Field Immunity:
- IEC 61000-4-8:2009
- IEC 60255-26:2013; Section 7.2.10
  - Severity Level: 1000 A/m for 3 seconds
  - 100 A/m for 1 minute; 50/60 Hz
- IEC 61000-4-9:2001
  - Severity Level: 1000 A/m
- IEC 61000-4-10:2001
  - Severity Level: 100 A/m (100 kHz and 1 MHz)

Power Supply Immunity:
- IEC 61000-4-11:2004
- IEC 61000-4-17:1999
- IEC 60068-2-7:1988
- IEC 60255-26:2013; Section 7.2.11
- IEC 60255-26:2013; Section 7.2.12
- IEC 60255-26:2013; Section 7.2.13

EMC Emissions

Conducted Emissions:
- IEC 60255-26:2013 Class A
- FCC 47 CFR Part 15.107 Class A
- ICES-003 Issue 6
- EN 55011:2009 + A1:2010 Class A
- EN 55022:2010 + AC:2011 Class A
- EN 55032:2010 + AC:2013 Class A
- CISPR 11:2009 + A1:2010 Class A
- CISPR 22:2008 Class A
- CISPR 32:2015 Class A
**Processing Specifications and Oscillography**

| AC Voltage and Current Inputs: | 32 samples per power system cycle (based on FNOM) |
| Digital Filtering: | All analog quantities are calculated every 1/4 cycle over 640 samples. |
| Protection and Control Processing: | Processing interval is 4 times per power system cycle (except for math variables and analog quantities, which are processed every 25 ms). |

**Oscillography**

| Length: | 180 cycles |
| Sampling Rate: | 32 samples per cycle, unfiltered |
| Trigger: | Programmable with Boolean expression |
| Format: | Compressed ASCII |
| Time-Stamp Resolution: | 1 ms |
| Time-Stamp Accuracy: | ±5 ms |

**Sequential Events Recorder**

| Time-Stamp Resolution: | 1 ms |
| Time-Stamp Accuracy (with respect to time source): | ±5 ms |

**Neutral Fundamental Overvoltage (59N)**

| Pickup Range: | OFF, 5.0–150.0 V |
| Pickup Accuracy: | ±5% of user setting plus ±1 V |
| Time Delay Range: | 0.1–400.0 seconds |
| Time Delay Accuracy: | ±0.1% of user setting plus ±4.2 ms at 60 Hz |

**Neutral RMS Overvoltage (59NRMS)**

| Pickup Range: | OFF, 5.0–150.0 V |
| Pickup Accuracy: | ±5% of user setting plus ±1 V |
| Time Delay Range: | 0.1–400.0 seconds |
| Time Delay Accuracy: | ±0.1% of user setting plus ±4.2 ms at 60 Hz |

**Rotor Field Ground Protection (64F)**

(Optional—Requires SEL-2664 Field Ground Module)

| Pickup Range: | OFF, 0.5 kΩ–200 kΩ * |
| Pickup Accuracy, Steady State: | ±5% ±500 Ω for 48 ≤ field voltage ≤ 825 Vdc |
| Time Delay Range: | 0.1–400.0 seconds |
| Time Delay Accuracy: | ±0.5% ±5 ms |

* Insulation resistance metering is supported as high as 20 MΩ; protection is supported as high as 200 kΩ.

**Metering**

Accuracies are specified at 20°C, nominal frequency, unless otherwise noted.

| L_SRC (Injection Source Current) | Magnitude Accuracy: | ±5% plus ±0.05 mA |
| IN (Neutral Current) | (within 1 mA–16 mA rms): | ±5% plus ±0.05 mA |
| Stator Ground Insulation Resistance: | ±10% of Rf ≤ 50 Ω for Rf ≤ 2 kΩ * |
| (Rf = stator insulation resistance to ground) | ±15% of Rf for 2 kΩ ≤ Rf ≤ 10 kΩ * |
| Rotor Field Insulation Resistance: | ±5% ±500 Ω for 48 Vdc ≤ field voltage ≤ 825 Vdc |
| VN (Neutral Voltage) | (within 2.5–240 V secondary): | ±5% of user setting plus ±1 V |

* Typical. Measurement accuracy is affected by installation-specific factors such as NGR location, parallel generator configuration, injection transformer heating, accurate knowledge of the NGR tap ratio, etc. The highest value displayed is 99.99 kΩ. Measurement accuracy improves at lower insulation resistances.
