**SEL-2730M 24-Port Managed Ethernet Switch**

Reliable Ethernet Communication for Substation and Plant Networks

---

**Major Features and Benefits**

The SEL-2730M Managed Ethernet Switch is designed for the harsh environments commonly found in the energy and utility industries. The SEL-2730M supports communications infrastructures built for engineering access, supervisory control and data acquisition (SCADA), and real-time data communication and offers the same reliability found in SEL protective relays.

- **Reliable.** Increase availability with the SEL-2730M, which is designed, built, and tested to function in harsh environments such as substations. Optional hot-swappable, dual power supplies allow connectivity to primary and backup power sources.

- **Flexible.** Maximize flexibility by using SEL-2730M ordering options to meet different network configurations. Order the SEL-2730M with Ethernet ports in combinations of copper, single-mode fiber, and multimode fiber. Add even more flexibility by using the four small form-factor pluggable (SFP) modules to change port configurations when network designs change.

- **Ease-of-Use.** Simplify configuration and maintenance with a secure web interface that allows convenient setup and management. Configure settings offline using ACSELERATOR QuickSet® SEL-5030 Software or through an exported settings file that can be imported later on the switch.

- **Virtual Local Area Networks (VLANs).** Segregate traffic and improve network organization and performance. Take advantage of IEEE 802.1Q-2005 VLANs to separate IEC 61850 GOOSE messages from other traffic with as many as 4094 LANs.

- **Traffic Prioritization.** Support critical substation messaging by classifying and prioritizing traffic into one of four priority levels through VLAN-based 802.1Q-2005 Class of Service (CoS) and IP-based DiffServ Differentiated Services Code Points (DSCP).

- **Rapid Spanning Tree Protocol (RSTP).** Use IEEE 802.1D-2004 Rapid Spanning Tree Protocol (RSTP) to speed network recovery and convergence after a topology change caused by a link or device failure.

- **Bridge Protocol Data Unit (BPDU) Guard.** Improve network robustness by enabling BPDU Guard to disable a port when unexpected BPDUs are received.

- **Port Rate Limiting.** Prevent network storms from disabling your network by configuring maximum allowed rates for ingress (incoming) or egress (outgoing) traffic on each port.
- **Multicast MAC Filtering.** Filter multicast traffic to reduce network load on end devices.
- **Port-Based MAC Security.** Use port-based MAC security to limit network access to authorized devices.
- **Time Synchronization.** Synchronize time by using network time protocol (NTP). Time-align events and user activity across your system.
- **Syslog.** Log events for speedy alerts, consistency, compatibility, and centralized collection. Use the switch to forward syslog system and security logs to as many as three central servers.
- **Dynamic Host Configuration Protocol (DHCP).** Easily connect a laptop computer during initial setup by using settings that enable the front-panel 10/100BASE-T Ethernet port to function as a DHCP server.
- **Security and Monitoring.** Increase security by taking advantage of SNMPv3 and HTTPS features. SNMPv3 provides secure network management and is interoperable with existing network management systems (NMS). An HTTPS web interface provides secure and intuitive switch management. Map system and security events to configurable alarm contact behavior for alarming through an external system, such as an existing SCADA network.
- **Port Mirroring.** Monitor ingress and egress traffic for viewing network statistics and performing troubleshooting.
- **User-Based Accounts.** Provide user accountability and separate authorization levels for configuration and maintenance. Use LDAP or RADIUS with two-factor authentication for centralized user authentication.

**Functional Overview**

![Functional Diagram](image)

The base-model SEL-2730M has four Gigabit Ethernet copper ports and sixteen 10/100 Mbps copper Ethernet ports, built as 4-port modules. You can order each of the 10/100 Mbps copper port modules as single- or multimode 100 Mbps fiber-optic ports to meet the unique requirements of your network. You can also add as many as four fiber-optic Gigabit Ethernet ports via small form-factor pluggable (SFP) transceivers, for a total of 24 ports.

- **Four small form-factor pluggable (SFP) ports.** Ports 1–4 are compatible with the single- or multimode fiber SFP transceivers orderable from SEL.
- **Four Gigabit Ethernet ports.** Ports 5–8 support 10/100/1000 Mbps copper Gigabit Ethernet.
- **Sixteen Fast Ethernet ports.** Ports 9–24 can be ordered in combinations of 4-port groups of either copper or fiber.
Redundant, hot-swappable power supplies. Optional redundant power supplies provide failover protection. Connect a separate power source to each power supply. If one source fails, the other continues to keep the switch operational. The power supply has an estimated MTBF of 3000 years.

Reversible mounting. The SEL-2730M comes with reversible mounting ears to support both front and rear-panel installations.

SEL manufactures the SEL-2730M with the same high standards as those for SEL protective relays and backs it with the same 10-year worldwide warranty.

The SEL-2730M meets or exceeds the IEEE 1613 Class 1, IEC 61850-3, and IEC 60255 industry standards for communications devices in electrical substations for vibration, electrical surges, fast transients, extreme temperatures, and electrostatic discharge.
