Available in a 1U or 3U chassis, the SEL-3530 Real-Time Automation Controller (RTAC) is a powerful automation platform that combines the best features of the embedded microcomputer form factor, embedded real-time operating system, and secure communications framework with IEC 61131-3 PLC programmability.

Major Features and Benefits

➤ **Simple Setup With acSELERATOR RTAC® SEL-5033 Software.** Build a system quickly using preconfigured device templates for SEL relays and other communications connections. The Tag Processor provides methods to map data relationships between communications protocols visually.

➤ **Multiple Device Functions in One Reliable Device.** Use a single RTAC as a protocol gateway, RTU, logic processor, PAC, engineering port server, event processor, and system-wide SER logger/viewer.

➤ **Proven Reliability.** The RTAC is designed and tested to withstand vibration, electrical surges, fast transients, and extreme temperatures that meet or exceed protective relay standards and IEEE 1613 “Standard Environmental and Testing Requirements for Communications Networking Devices in Electric Power Substations.”

➤ **IEC 61850.** Integrate high-speed control schemes between the RTAC and relays with IEC 61850 GOOSE peer-to-peer messaging. Poll and send data sets and reports from other IEDs with IEC 61850 MMS client/server.

➤ **Integrated HMI.** Build custom human-machine interface (HMI) displays quickly and easily without the need for mapping data tags. Because it is web-based, no special software is needed for viewing HMI displays.

➤ **Protection Against Malware and Other Cybersecurity Threats.** Protect your RTAC system with exe-GUARD®, which uses advanced cryptographic algorithms to authorize the execution of any program or service on the system. Any tasks not approved by the whitelist are blocked from operation.

➤ **User Security.** Assign individual user and role-based account authentication and strong passwords. Use Lightweight Directory Access Protocol (LDAP) for central user authentication.

➤ **Integrated Security Management.** Comply with NERC/CIP user authentication, logging, and port control requirements.

➤ **Standard IEC 61131-3 Logic Design.** Create innovative logic solutions directly in acSELERATOR RTAC by using any of the editor tools: Tag Processor, Structured Text, Ladder Logic, or Continuous Function Chart.

➤ **Flexible Protocol Conversion.** Apply any available client or server protocol on any serial or Ethernet port. Each serial port can be used in software-selectable EIA-232 or EIA-485 mode. The two rear Ethernet ports can optionally be copper or fiber-optic connectors.

➤ **Synchrophasor Technology Included.** Use the IEEE C37.118 client protocol to integrate synchrophasor messages from relays or phasor measurement units (PMUs) in your system. These messages can be used for logic and control in the station or converted to DNP3 or other protocol for SCADA usage.
Standard Data Management. Map and scale data points easily between protocols in small and large systems. You can also normalize IED data into common data types, time-stamp formats, and time zones.

Single-Point Engineering Access. Gain engineering access to station IEDs through a single serial port, external modem, or high-speed network connection.

Product Overview

Functional Diagram

IEC 61131 Logic Engine
As depicted in the functional diagram, each RTAC includes an IEC 61131 logic engine that is preconfigured to have access for all system tags, IED data, diagnostics, alarms, security events, and communications statistics for use integrating your system. The system has no functional separation between those tags mapped for communications protocols and those used in programmable logic. This architecture greatly simplifies system configuration effort because no additional selection is required to identify tags used by the logic engine. You simply use any needed IED data, calculated values, and system tags in deterministic logic for the control of critical applications.

Management of the task-processing sequence and solve rate in the RTAC is similar to that for traditional PLCs or PACs. The fastest processing rate is 4 ms. Optimize the processor utilization by setting the processing rate no faster than necessary for your application.

Task processing in the logic engine includes protocol I/O, system management, and any custom logic programs you create using Structured Text (ST), Ladder Logic Diagram (LD), or Continuous Function Charts (CFC). CFC programs are a type of IEC 61131-3 Function Block Diagram (FBD) that provide more programming flexibility than standard FBDs. The ACSELERATOR RTAC software includes the IEC 61131-3 and Tag Processor editors you will use to manage any protocol information and custom logic needed for your system.

Manage User Accounts and Alarms in Web Server
The built-in RTAC web interface provides the ability to manage user accounts and system alarms remotely. Each user account has a unique username, password, and assigned role that defines system permissions. You can also configure the RTAC to use LDAP central authentication for user account management. The system includes web pages for monitoring user logs and maintaining network policies.

Logged tag values and system events provide a system-wide Sequence of Events report. View the logs online or use ODBC connectivity to download them to a central database.

You can also configure Ethernet connections and monitor system status from the web interface. All of the Ethernet ports can operate on independent networks, or you can bind them for failover operation.

Flexible Engineering Access
Access Point Routers in the RTAC provide a means for creating transparent connections between any two ports. A transparent connection is a method for using the RTAC as a port server to connect remotely to an IED. Simple logic in the RTAC enables remote engineering access only through supervisory commands.
Seamless System Configuration

acSELERATOR RTAC is a Microsoft Windows compatible configuration software for offline and online use with the SEL-3530 RTAC. A project in acSELERATOR RTAC contains the complete configuration, settings, and logic for an individual RTAC device. Preconfigured device templates are available for you to add all device and master connections to the project tree view.

Once you create the settings for a specific device connection, improve engineering efficiency by saving a custom device template for later use with similar projects. Share custom templates via email or network for even greater savings.

The Tag Processor view facilitates the mapping of operational data quickly between IEDs and SCADA. acSELERATOR RTAC is compatible with Microsoft Excel and other programs, so you can save time and increase accuracy by copying SCADA maps from the source.

There is no need to install or learn more than one software interface. Use the Structured Text, Ladder Diagram, or Continuous Function Chart editors included with acSELERATOR RTAC to develop custom IEC 61131 logic.

Optional Input/Output

If the optional I/O is installed in the RTAC, the system associates system data tags automatically with each input and output for use in the Tag Processor or IEC 61131 logic. You can program outputs to operate according to remote control signals or local logic. This powerful capability lets you build adaptive protection schemes, automate responses to alarms, and control power system apparatus directly.

Data Concentration and Protocol Conversion

Configure each serial or Ethernet port to use any of the client, server, or peer-to-peer protocols available for the RTAC. For example, when you use IEEE C37.118 protocol to receive synchrophasor messages, you can map analog or Boolean tags and time stamps to DNP3 and send the data to SCADA very efficiently. You can also map data to IEC 61850 GOOSE messages for high-speed control schemes.

Additionally, when you need to define relay connections in a primary/backup arrangement, use the Tag Processor to map relay tags so that the master stations will receive power system information only from the active relay.
Applications

Substation SCADA, Report Retrieval, Engineering Access, and Alarm Notification

The RTAC can act as a data concentrator by using protocols such as IEC 61850 MMS client, Modbus, DNP3, IEC 61850 GOOSE, or Mirrored BITS® communications to integrate both serial and Ethernet IEDs. Enable logging on any system or IED tag to view and archive a station-wide event record.

The RTAC Ethernet connection provides a means to remotely access the system to monitor logs and diagnostics. First establish a remote connection with any IED connected to the RTAC through Engineering Access communications channels. Then use the ACSELERATOR QuickSet® SEL-5030 Software suite to manage protection and control settings for these relays remotely.

Synchrophasor Integration and Control

The RTAC can integrate synchrophasor messages from the IEEE C37.118 protocol into SCADA protocols, such as DNP3 or Modbus. Easily include the source PMU time stamps and time quality attributes in the SCADA message to allow for system-wide usage of synchrophasor data.

Within the RTAC logic engine, you can perform complex math and logic calculations on synchrophasor data from IEEE C37.118-compliant devices.

The RTAC also synchronizes the time clocks in attached devices that accept a demodulated IRIG-B time signal. The RTAC regenerates the demodulated IRIG-B signal from an external modulated or demodulated source; this signal is precise enough for synchrophasor applications.
Real-Time Control and Logic Processing

The built-in logic processor provides high-speed control and transfer of signals from SEL Mirrored Bits devices, or other protocols. The RTAC can serve as the system controller and SCADA gateway to eliminate costly equipment (such as breakers, interposing relays, and wiring) while also reducing engineering and labor costs.

The intuitive ACCELERATOR RTAC software provides simple setup of analog and binary tags from any device in the system. Integrated tools scale values and create logic in a flexible IEC 61131-3 configuration environment.

You can take advantage of multiprotocol support to collect SCADA information, process control commands, and use NTP time synchronization through a single communications link to each Ethernet device.

Secure Communications and User Management

The RTAC and SEL accessories offer security for your automation network. Per-user security profiles provide compliance with role-based requirements. The system can employ intrusion detection, notification, and logging to help maintain perimeter integrity.

The RTAC includes security features so that your system complies with NERC/CIP requirements for auditing, logging, port control, web authentication, and password restrictions. The RTAC also supports central authentication through your existing LDAP server.

By including SEL serial and wireless encrypting devices with the RTAC, you can protect remote serial communications to recloser controls or other connected devices.
Control Systems

The custom logic, communications protocols, and I/O in the SEL-3530, SEL-2411, and SEL-2440 permit you to implement complete control systems, whether you perform discrete sequences, continuous control, monitoring, or asset management. SEL subjects its products to tests for harsh environments, so you can be confident that your control system will work reliably in tough applications. Minimize loop wiring and simplify commissioning by installing controls close to process equipment and integrating them with industry standard communications protocols. Additionally, the SEL-3354 Embedded Automation Computer can provide HMI and data archiving functions.

Use a powerful IEC 61131 logic engine to design custom control programs in the RTAC. You can set the logic solve rate and program execution order to meet your system requirements. Operate the RTAC as a master controller, and use SELOGIC® control equations in the SEL-2411 and SEL-2440 to perform distributed sequential or continuous control algorithms.

With a variety of physical interfaces and open protocol options, such as IEC 61850 GOOSE messaging, the RTAC makes system integration simple. It will reduce engineering time and complexity, so that you can focus on improving productivity and efficiency rather than on fixing communications problems.

Panel Features

LEDs simplify diagnostics by indicating transmitted and received activity on each port.

Rugged enclosure withstands EMI, RFI, shock, and vibration.

Wide operating temperature range: +85°C to -40°C.

Figure 3 Front-Panel View (3U Chassis Only)

- Lamp test pushbutton and diagnostic LEDs
- Programmable bicolor LEDs with configurable labels provide custom annunciation
- Front Ethernet and USB ports for quick, convenient, system setup and checkout
- Programmable I/O integrates local and remote control
- All terminals are clearly numbered and lettered for wiring and testing
- Independent Ethernet ports may be RJ45 or LC fiber
- Demodulated IRIG-B input and output for high-accuracy time synchronization
- Serial ports are EIA-232/EIA-485 software selectable
- Isolated EIA-232/485 port
- Programmable input and alarm contact

Specifications

Compliance

Designed and manufactured under an ISO 9001 certified quality management system
UL Listed to U.S. and Canadian safety standards (File E220228; NRAQ, NRAQT)
CE Mark

General

Operating System

SEL Linux Yellowstone running Linux kernel 3.x with real-time preemption patches

Operating Temperature Range

–40° to +85°C (–40° to +185°F)

Note: Not applicable to UL applications.

Operating Environment

Pollution Degree: 2
Overvoltage Category: II
Insulation Class: 1
Relative Humidity: 5%–95%, noncondensing
Maximum Altitude: 2000 m

Weight (Maximum)

5.44 kg (12 lb)

Processing and Memory

Processor Speed: 533 MHz
Memory: 1024 MB DDR2 ECC RAM
Storage: 2 GB

Security Features

Account Management: User Accounts
User Roles
LDAP Central Authentication
RADIUS Central Authentication
Strong Passwords
Inactive Account Logouts

Intrusion Detection: Access/Audit Logs
Alarm LED
Alarm Contact

Encrypted Communications: SSL/TLS, SSH
HTTPS

Engineering Access

Modes: SEL Interleaved, Direct
Port Server: Map Serial Ports to IP Ports
Secure Web Server: Diagnostic and Communications Data

Time-Code Input (Modulated IRIG-B)

Input Impedance: 2 kΩ
Accuracy: 500 μs

Time-Code Input (Demodulated IRIG-B)

On (1) State: $V_{ih} \geq 2.2 \text{ V}$
Off (0) State: $V_{il} \leq 0.8 \text{ V}$
Input Impedance: 1.5 kΩ
Accuracy: 250 ns

Time-Code Output (Demodulated IRIG-B)

On (1) State: $V_{oh} \geq 2.4 \text{ V}$
Off (0) State: $V_{ol} \leq 0.8 \text{ V}$
Load: 50 Ω
Output Drive Levels

Demodulated IRIG-B: TTL 120 mA, 3.5 Vdc, 25 Ω
Serial Port: TTL 2.5 mA, 2.4 Vdc, 1 kΩ

Network Time Protocol (NTP) Modes

NTP Client: As many as three configurable servers
NTP Server

Precise Time Protocol (PTP)

PTP Client: Peer delay request and end-to-end path delay supported

Communications Ports

Ethernet Ports

Ports: 2 rear, 1 front
Data Rate: 10 or 100 Mbps
Front Connector: RJ45 Female
Rear Connectors: RJ45 Female or LC Fiber (single-mode or multimode, 100 Mbps only)

Serial Ports

Ports: 17 (33 with optional expansion)
Type: EIA-232/EIA-485 (software selectable)
Data Rate: 300 to 115200 bps (Ports 1–16, 18–33)
300 to 57600 bps (Port 17)
Connector: DB-9 Female (Ports 1–16, 18–33), Isolated 8 pin (Port 17)
Time Synchronization: IRIG-B
Power: +5 Vdc power on Pin 1 (500 mA maximum cumulative for 16 ports)

USB Ports

Ports: 2
1 Host Port: Type A
1 Device Port: Type B

Fiber Optics

Class 1 LASER/LED

Data Rate: 100 Mbps
Connector Type: LC
Wavelength: 1300 nm
Multimode Option: 62.5 μm fiber
TX Max. Power: –14 dBm
TX Min. Power: –20 dBm
RX Sensitivity: –31 dBm
RX Overload: –14 dBm
Min. TX Level: –20 dBm
Min. RX Sensitivity: –31 dBm
Optical Budget: 11 dBm
Max. Distance: 2 km

Single-Mode Option: 9 μm fiber
TX Max. Power: –8 dBm
TX Min. Power: –15 dBm
RX Sensitivity: –25 dBm
RX Overload: –8 dBm
Min. TX Level: –15 dBm
Min. RX Sensitivity: –25 dBm
Optical Budget: 10 dBm
Max. Distance: 15 km

Inputs

Optoisolated Control Inputs

When used with dc control signals:

- 24 Vdc: Pickup 19.2–30.0 Vdc, Dropout < 5.0 Vdc
- 48 Vdc: Pickup 38.4–60.0 Vdc, Dropout < 28.8 Vdc
- 110 Vdc: Pickup 88.0–132.0 Vdc, Dropout < 66.0 Vdc
- 125 Vdc: Pickup 105–150 Vdc, Dropout < 75.0 Vdc
- 220 Vdc: Pickup 176–264 Vdc, Dropout < 132 Vdc
- 250 Vdc: Pickup 200–300 Vdc, Dropout < 150 Vdc

When used with ac control signals:

- 24 Vac: Pickup 16.4–30.0 Vac rms, Dropout < 5.0 Vac rms
- 48 Vac: Pickup 32.8–60.0 Vac rms, Dropout < 20.3 Vac rms
- 110 Vac: Pickup 75.1–132.0 Vac rms, Dropout < 46.6 Vac rms
- 125 Vac: Pickup 89.6–150 Vac rms, Dropout < 53 Vac rms
- 220 Vac: Pickup 150.3–264 Vac rms, Dropout < 93.2 Vac rms
- 250 Vac: Pickup 170.6–300 Vac rms, Dropout < 106 Vac rms

Current draw at nominal dc voltage:

- <5 mA at nominal voltage
- <8 mA for 110 V option

Outputs

Mechanical Durability: 10 M no-load operations

DC Output Ratings

- Rated Operational Voltage: 250 Vdc
- Rated Voltage Range: 19.2–275 Vdc
- Rated Insulation Voltage: 300 Vdc
- Make: 30 A @ 250 Vdc per IEEE C37.90
- Continuous Carry: 6 A @ 70°C, 4 A @ 85°C
- Thermal: 50 A for 1 s
- Contact Protection: 360 Vdc, 40 J MOV protection across open contacts

Operating Time (coil energization to contact closure, resistive load):

- Pickup/Dropout time ≤8 ms typical

Breaking Capacity

(10,000 Operations) per IEC 60255-20:1974:

- 48 V: 0.50 A, L/R = 40 ms
- 125 V: 0.30 A, L/R = 40 ms

Cyclic Capacity

(2.5 Cycles/Second) per IEC 60255-20:1974:

- 48 V: 0.50 A, L/R = 40 ms
- 125 V: 0.30 A, L/R = 40 ms

AC Output Ratings

- Rated Operational Voltage: 240 Vac
- Rated Insulation Voltage: 300 Vac
- Utilization Category: AC-15 (control of electromagnetic loads > 72 VA)
- Contact Rating Designation: B300 (B = 5 A, 300 = rated insulation voltage)
- Contact Protection: 270 Vac, 40 J
- Continuous Carry: 3 A @ 120 Vac, 1.5 A @ 240 Vac, 5 A
- Rated Frequency: 50/60 ± 5 Hz

Operating Time (coil energization to contact closure):

- Pickup/Dropout Time: ≤8 ms

Electrical Durability

- Make VA Rating: 3600 VA, cosΦ = 0.3
- Break VA Rating: 360 VA, cosΦ = 0.3

Power Supply

Input Voltage

Rated Supply Voltage: 125–250 Vac; 110–240 Vac, 50/60 Hz
48–125 Vac; 120 Vac, 50/60 Hz
24–48 Vac

Input Voltage Range:

- 85–264 Vac
- 18–60 Vdc polarity dependent

Power Consumption

- AC: <40 VA
- DC: <30 W

Interruptions

- 20 ms @ 24 Vdc
- 20 ms @ 48 Vdc
- 50 ms @ 125 Vac/Vdc
- 100 ms @ 250 Vac/Vdc

Fuse Rating

- 125–250 V Model: 2.5 A, high breaking capacity, time lag T, 250 V (5x20 mm, T2.5AH 250 V)
- 48–125 V Model: 2.5 A, high breaking capacity, time lag T, 250 V (5x20 mm, T2.5AH 250 V)
- 24–48 V Model: 7.0 A, high breaking capacity, time lag T, 250 V (5x20 mm, T7.0AH 60 V)
