SEL University Programs and Tracks Overview

Are you an engineer, technician, power system specialist, or manager interested in furthering your career? Check into our industry-focused programs for engineers and technicians. SEL University (SELU) programs consist of groups of courses organized into one or more tracks. Topics that support your professional development goals include protection, monitoring, control, automation, communications, metering, and management of utility and industrial electric power.

Students who register for all courses needed to fulfill the requirements of their chosen track receive a 10 percent discount on those courses and any others in that track.

Engineer Program

The SELU Protection Program for Engineers consists of multiple tracks for both power system fundamentals and product application courses. These tracks are designed for individuals who want to specialize in a specific area of the protection system.

Track

- Generation System Protection Track
- Transmission Line Protection Track
- Substation Protection Track
- Distribution System Protection Track
- Industrial Power System Protection Track
- Power System Communications Track

Technician Program

The SELU Protection Program for Technicians is designed for those involved in setting, testing, and troubleshooting protective relays.

Track

- Power System Protection for Technicians Track
